

The Mediterranean is the deadliest sea on Earth: in 2014 approximately 75% of all refugees who died worldwide crossing land or sea borders drowned here at their attempt to enter "Fortress Europe". A total number of at least 3419 individuals (UNHCR), hundreds of children among them, had to die, because European law allows only those reaching the borders of one of our countries to claim asylum. What is wrong with us? These people were fleeing hunger, poverty, political oppression, racial persecution, sexual discrimination, environmental threats, drone attacks or war – violence mostly or partially caused by the West. What is wrong with us Europeans?

Konstantin Fischer, 2015
